

40-W LED Pattern Projectors

The LT2PRXP series from **Opto Engineering** are 40-W continuous and strobe LED pattern projectors meant for applications including inspection, pick-and-place robot guidance, 3D industrial reconstruction, and alignment. The pattern projectors are available in two different

versions, including a standard version that integrates a built-in driver for continuous and strobe mode operations and a compact version designed for strobe mode only operations in tight spaces. The LT2PRXP projectors feature a standard five-pin M12 connector with PNP/NPN/analog dimming input and an aluminum heat sink designed to dissipate heat, ensuring a long lifetime for the LED module and driving electronics.
